

## Software Test Engineer

iJet Technologies, Inc. is executing upon a global strategy to successfully deliver world-class applications and connectivity solutions to the aviation industry.

This position is for a software test engineer to test applications and aviation software within a highly adaptable physical and virtual environment comprised of specialized communication, aviation, and computing systems, supporting iJet System product development and simulations.

### Primary Responsibilities and Expectations

- Provide automation of regression testing across all benches, products and teams.
- Provide automated test suites using your deep knowledge of the automated test marketplace to choose, define and implement the most efficient means to ensure product quality.
- Develop data generation mechanisms and processes for managing test cases, data, and results.
- Leverage your ability to work in a dynamic environment where requirements may be incomplete or vague to help validate and baseline system functionality
- Perform release activities in coordination with Project Management, QA, Release Management and Development teams in a timely and efficient manner, to ensure smooth repeatable releases.
- Support multiple concurrent releases through various test environments.
- Troubleshoot complex problems, release issues and environment issues in a multi-component environment.
- Write clear, concise and reproducible defects.
- Manage and report on the status of in-flight projects in terms of risk, test completion, and test failure metrics in a manner consumable by all levels of the organization.

### Qualifications and Requirements

- BA/BS Degree preferred or equivalent work experience.
- 5+ years in a LAMP Application Test Engineering role.
- Solid understanding and practical experience of Agile SDLC.
- 2+ years' experience with automated test tools such as Selenium.
- Prior experience with regulated software development, particularly aerospace development a strong plus.
